DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 3/11/05 has been entered.

Response to Arguments

2. Applicant's arguments filed 3/11/05 have been fully considered but they are not persuasive. With respect to the arguments for independent claim 1, Applicant argues that the prior art is limited to a narrow spectral range, and that it can not operate over a large spectral range. Examiner respectfully disagrees. The prior art of Kewitsch meets the limitations as claimed. There is no specific limitation as to how large the spectral range is. Kewitsch, although operating under a narrow spectral range, the claim only requires that the device operate in the spectral range of the frequencies added or dropped by a filter. It appears that Kewitsch meets this limitation.

3. Applicant further argues that the prior art of Damask et al. fails to disclose an input and output coupler with optical resonators. Examiner respectfully disagrees. It appears that Damask et al. discloses an input and output coupling function with optical resonators. It appears the limitations as claimed have been met.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1, 2, 5-7 and 14-15 are rejected under 35 U.S.C. 102(b) as being anticipated by United States Patent Number 5,805,751 to Kewitsch et al.

As to claims 1, 2, 5-7, Kewitsch et al. discloses in the abstract and figures 1 and 15:

A large bandwidth add-drop filter for a planar waveguide device comprising:

- At least one directional coupler receiving an input signal and providing an output signal (Figure 15); and
- At least two grating waveguides having a photonic bandgap covering at least 8 optical channels (Figure 16).

As to claims 14 and 15, Kewitsch et al. discloses in column 15, lines 3-6 a method of tuning the coupler using heat.

6. Claims 1-2, 4-13 and 18 are rejected under 35 U.S.C. 102(b) as being anticipated by United States Patent Number 5,915,051 to Damask et al.

Damask et al. discloses in the abstract, column 21, line 27, table I, and column 33, line 38:

An add-drop filter for a planar slab waveguide device comprising:

- At least one directional coupler receiving an input signal and providing an output signal; and

Art Unit: 2883

- At least two grating waveguides having a superstructure grating strength (greater than $0.013\mu\text{m}^{-1}$).

As to claims 12-13, different characteristics of the grating periods are shown in Table I, and an equation for the waveguide coupling strength as a function of the waveguide separation is given in equation 50.

As to claim 18, there is a time delay (column 11, line 2).
